SOLUTION ARCHITECT I PMY GROUP

HELLO, I'M JAKE LASSLETT

SOLUTION ARCHITECT

A BIT ABOUT ME

Hi, I'm Jake! 👋 I'm a Google Cloud specialist who loves building data solutions that actually make life easier for people. I'm at my best when I'm taking a complex business problem and turning it into something elegant, efficient, and - most importantly - useful.

As a Solution Architect at PMY Group, I design cloud data platforms for some of the biggest names in sport, venues and entertainment - from the AFL and Brisbane Broncos to the Australian Grand Prix, Tennis Australia and Euroleague Basketball. I work fluently across GCP, AWS and Azure, and I've delivered every engagement model going: rapid POCs and executive demos through to full T&M, fixed-fee builds and strategic tender responses. Whether I'm architecting the platform or deep in the data engineering, I focus on delivering work that lasts.

When I'm not behind a screen at work, you'll probably find me tinkering with my home server - I recently spun up a Next.js app in Docker just to master GTM and GA4 tracking - staying active with some exercise, or spending time with my partner as we start the exciting journey of growing our family.

MY TOOLKIT

Python (Expert)	**SQL & BigQuery**	**GCP (4x Certified)**
Data Architecture	**Gemini CLI + MCP + Skills**	**Dataform & dbt**
Terraform	**CI/CD & GitOps**	**Consultancy & Pre-sales**

MY JOURNEY SO FAR

Solution Architect

PMY Group / 2026 - Present

As a Solution Architect in PMY's data & technology practice, I design and deliver cloud data platforms for major sports, venue and entertainment clients across GCP, AWS and Azure - including the AFL, Brisbane Broncos, Australian Grand Prix Corporation, Tennis Australia, Melbourne Park and Football Victoria. I author the solution architecture documents that anchor these builds, and I lead delivery across the full spectrum: serverless ingestion pipelines, warehouse-native ELT, single customer views and reusable, productised platform assets.

Euroleague Basketball — Live Venue-to-Cloud Stats Ingestion

REMOTE (EUROPE) I 2026 I PROOF OF CONCEPT & SOLUTION DESIGN

I designed and built a serverless GCP pipeline that ingests live play-by-play directly from the venue, running in parallel with a legacy on-prem SQL Server system and reimplementing its stored-procedure statistics logic in the cloud. Built on Cloud Run, Pub/Sub (per-game ordering keys), Cloud SQL and BigQuery with Cloud Armor and KMS, it scales to ~20 concurrent games and enforces a contractual, GDPR-ready data-exposure delay. I authored the full Solution Architecture Document.

Football Victoria — Unified Data Platform (Foundations)

MELBOURNE, AUSTRALIA I 2026 I FIXED-FEE DELIVERY

I delivered Phase 1 of a lean, governed Unified Data Platform on GCP, tailored to the needs of a smaller organisation. Cloud Run jobs and Cloud Scheduler land five sources (MailChimp, Play Football, Go Football, DRIBL, INTIX) into a GCS/BigQuery medallion architecture, with Dataform transforms building a Single Customer View and governed CDP, participation and ticketing datamarts. Provisioned end-to-end with Terraform (Cloud Foundation Fabric) and GitHub Actions CI/CD via Workload Identity Federation.

Google Data Engineer & Architect

NCS Group Australia / 2025 - 2026

As a Technical Leader within the Google Solutions Practice, I drove architectural excellence by developing modular, reusable assets and standardised service delivery frameworks. Beyond project execution, I played a critical role in strategic pre-sales and high-value tender responses - including leading a $5M+ AI-enabled warehouse architecture proposal in Singapore. I was a key contributor to internal knowledge sharing, building the technical blueprints that enabled our teams to deliver consistent, scalable cloud outcomes for global enterprise clients.

National Basketball League (NBL) — Platform Foundations & Reliability

MELBOURNE, AUSTRALIA I 2025 – 2026 I MANAGED SERVICE AGREEMENT

I contributed to the engineering foundations of the NBL's cloud-native GCP ecosystem, focusing on platform reliability and ingestion scalability. I developed robust, high-performance ingestion functions, architected a Terraform-managed test sandbox for safe pipeline experimentation, and built an automated monitoring framework that proactively catches Dataform job failures across the broader "Customer 360" landscape.

Senex Energy — Data Platform Modernisation (MSP)

BRISBANE, AUSTRALIA (REMOTE) I Q4 2025 – 2026 I MANAGED SERVICE AGREEMENT

In a complex data environment (Bitbucket, Terraform, Python, SQL), I led the mandatory migration of 60+ Cloud Functions to Python 3.13 and Gen 2. I architected a shift from a monolithic repository to a decoupled Micro-Repository pattern, implementing a robust GitOps workflow using Atlantis and Bitbucket Pipelines. This "shift-left" approach has significantly improved deployment safety and visibility across the function inventory.

Bega Group — B2B Telemetry Foundation

VICTORIA, AUSTRALIA I Q4 2025 – 2026

I led the greenfield implementation of a custom telemetry framework for the 'My Bega' B2B portal. This involved conducting deep-dive discovery workshops to map complex customer journeys and building a robust GTM/GA4 architecture from the ground up. I developed bespoke tracking for asynchronous claim submissions and standing order management, establishing a dual-container JSON-promotion workflow to ensure production stability.

Commonwealth Superannuation Corp — Enterprise Governance

MULTIPLE AUSTRALIAN LOCATIONS I Q4 2025 – 2026

I served as a strategic technical mentor within a highly regulated environment, providing both governance structure and technical capability uplift. I designed a mandatory Enterprise GTM Governance Model featuring a 3-gate review process and strict PII masking protocols. Additionally, I successfully integrated Sitecore Personalize, establishing a robust "Identity Bridge" with GA4 for enterprise personalisation.

Data Analyst

Wesfarmers Health / 2022 - 2025

I spearheaded a customer segmentation initiative using BigQuery, developed real-time reporting ecosystems with Looker, and engineered unified data models to drive business insights.

Stability Trial Chemist

Ego Pharmaceuticals / 2021 - 2022

I conducted complex analytical testing using HPLC, GC, and XRF, and authored comprehensive stability reports for pharmaceutical product compliance.

Quality Control Specialist

CosmaxNBT Australia / 2017 - 2021

I managed technical sampling, maintained strict QC documentation, and configured LIMS to help the laboratory run more efficiently.

THINGS I'VE BUILT

Analytics Playground

I built a production-grade e-commerce prototype called the Analytics Playground to put modern tracking to the test. It's a sandbox where I've implemented the complete GA4 e-commerce funnel - from item views to purchases - using a schema-driven Data Layer in a Next.js environment. It even features serverless instant search and dynamic social cards, proving that rigorous data collection can coexist with a fast, modern user experience.

Custom Gemini CLI

I built a high-performance CLI tool using Google Gemini and DuckDB for local AI-powered querying and metadata tagging, which I now use as a blueprint for helping clients with AI enablement.

Dataform Monitoring Blueprint

I developed an automated monitoring solution for BigQuery to give executive teams clear visibility into their cloud spending and resource performance.

EDUCATION

Master of Data Science

James Cook University

VERIFY

Graduate Diploma of Data Science

James Cook University

VERIFY

Bachelor of Science

La Trobe University
